

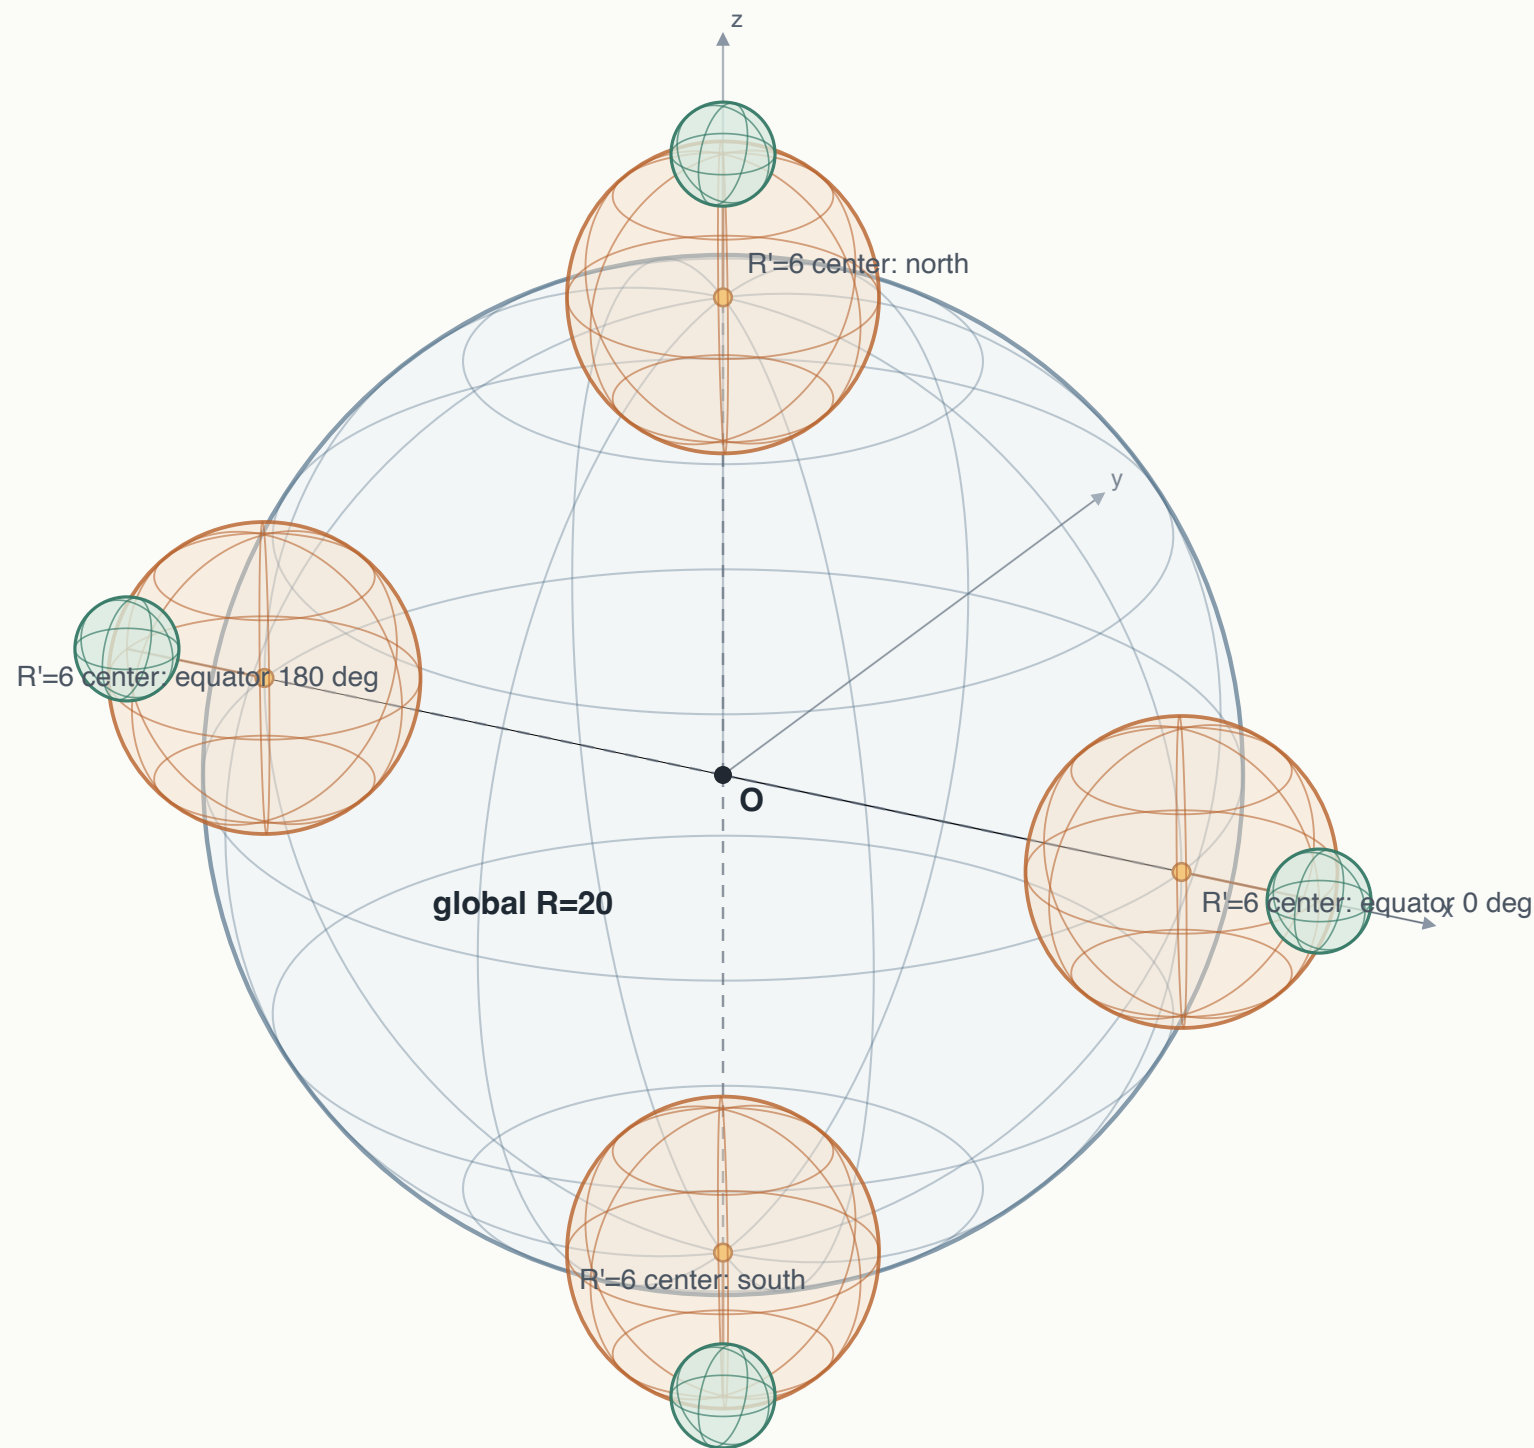

Figure 3. Exact 3D Hierarchy of Curved State Spaces

$R=20$ global sphere; $R'=6$ centers on its surface; $R''=2$ centers on each local surface.

Exact placement rules

$C_0=(0,0,0)$, radius 20. Four $R'=6$ centers lie at N, S, E0, E180 on the $R=20$ surface.
For each local center C , the $R''=2$ center is $C + 6 C/|C|$, exactly on the local sphere surface.
This is a toy-model state-space hierarchy, not a physical fractal spacetime claim.

Recursive reading

$R \rightarrow \{R'_a\} \rightarrow \{R''_a\}$: each smaller state space is placed by the same surface-center rule.
