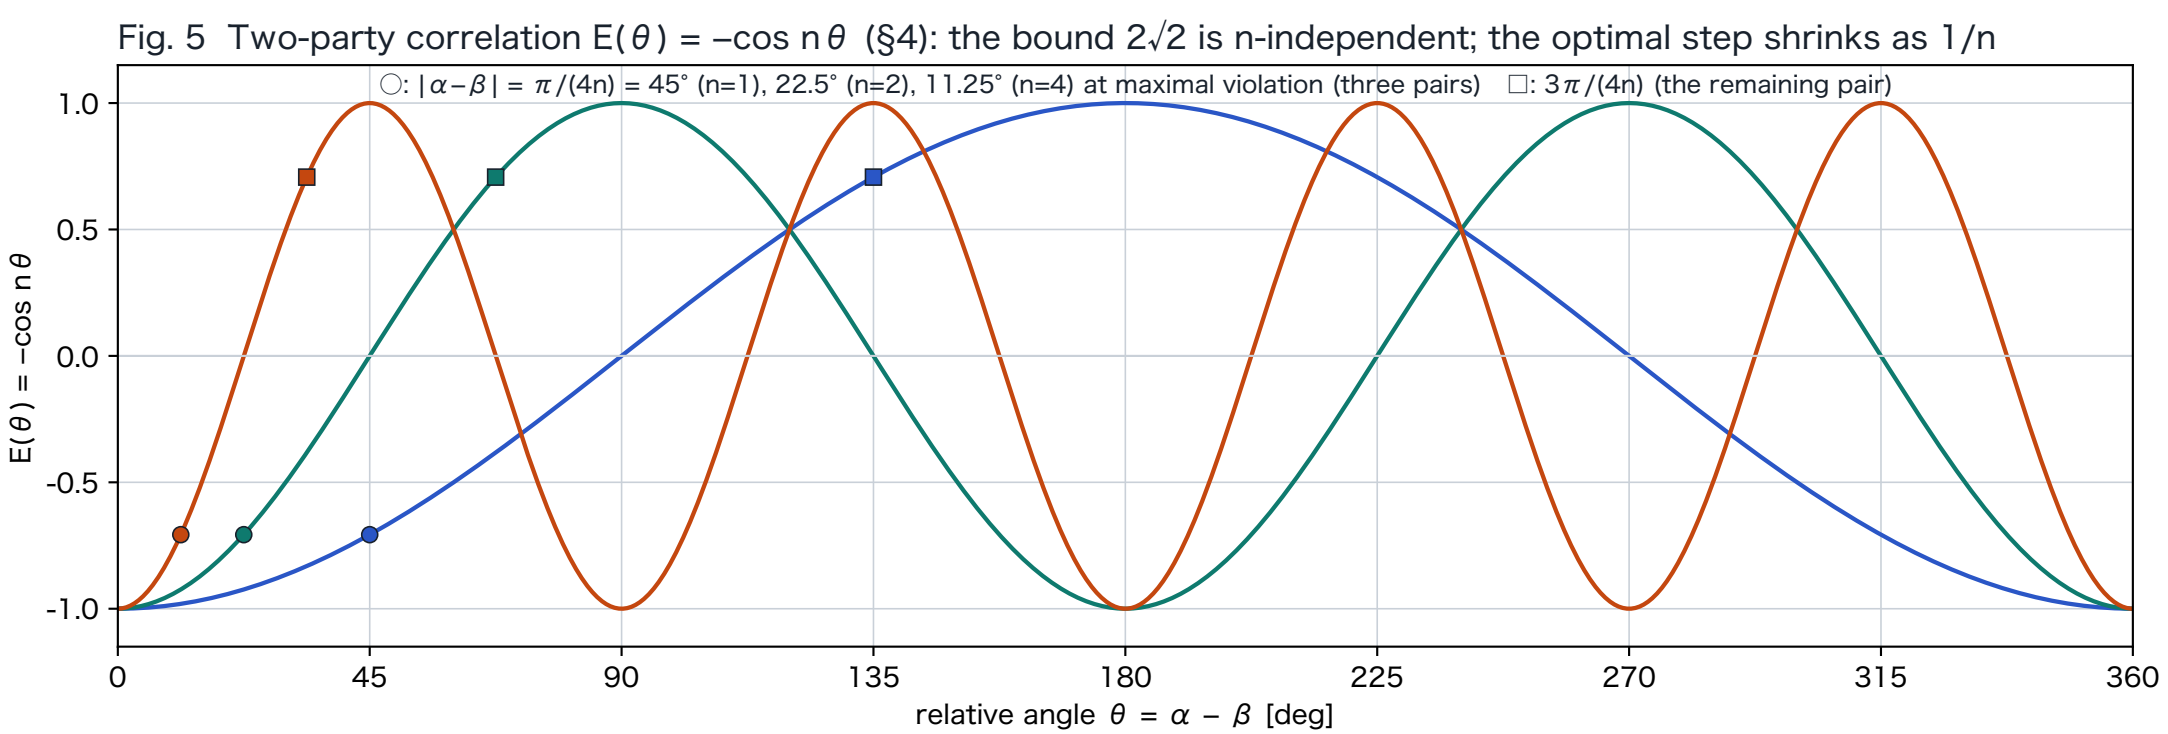

Fig. 5 Two-party correlation E(θ) = −cos nθ (§4): the bound 2√2 is n-independent; the optimal step shrinks as 1/n
○: |α−β| = π/(4n) = 45° (n=1), 22.5° (n=2), 11.25° (n=4) at maximal violation (three pairs) □: 3π/(4n) (the remaining pair)
